

What does the product contain?

- Exists of lauric acid / GML 90 with organic acids and Saponins.
- The product is available in a pure form and as a blend in which it is mixed with cornflour in buckets of 10 kg.

When should the product be administered to the sows and in which dosage ?

- DaaCare Piglet blend: 20 grams per sow per day. Starting the week before farrowing and continuing until 3 days after farrowing.
- DaaCare Piglet: 2 kg per 1000 kg dry feed.

What does it do ?

- It boosts the vitality of the piglets.

How can I measure if this is the case?

- The resistance (IgG - antibody) of the smaller and medium sized piglets will become higher, measured through the colostrum check;
- The level of the C12 (lauric acid) in the colostrum and milk will become higher.

What other results do we see?

- Ensures more homogeneous colostrum intake throughout the litter;
- Reduces the risk of stillborn piglets;
- Shows the best effects particularly among piglets born to younger breeding sows (parity 1 till 3).

What does it cost?

- € 0,055 per sow per day , during 10 days makes a total of € 0,55 per sow

How many sows can I feed from 1 bucket of 10 kg Daacare Piglet melange ?

- 50 Sows
